Your patient took the first step.

Let's take the next one together.

Dear Colleague,

A patient of yours recently completed **MindX One** precision psychiatry blood testing. We are honored to help with your patients' care, and we would like to help you, too.

MindX One measures **356 RNA blood biomarkers** to report risk in eight areas: mood, suicidality, stress, anxiety, psychosis, pain, memory and longevity. It then matches each patient against **207 medications and 365 nutraceuticals**.

It is built on over 20 years of published academic scientific and clinical research by my teams and me, including papers in the Nature journals *Molecular Psychiatry* (2017) and *Translational Psychiatry* (2024). For the last 5 years, it has been used by clinicians and patients across the country.

WHAT YOU AND YOUR PATIENTS RECEIVE

- **8 individual disease risk reports** — stress, pain, anxiety, mood disorders, psychosis, suicidality risk, memory disorders, longevity
- **An Integrated Summary** that shows all 8 risks at a glance
- **Personalized medication and nutraceutical matches**
- **A plain-language report** that explains the results
- **Secure MindX Portals**, including a clinician portal with Max, our free AI advisor

WE'RE HERE FOR YOU

- **A 15-minute call.** We'll walk you through a sample report and how to fit testing into your practice. Just send us a few times that work for you.
- **Our published papers.** Just ask, and we'll send you the PDFs.
- **Nationwide testing,** supported by our teams in Indianapolis and Phoenix, Arizona.

Call us at **317-220-8590** or email **info@mindxsciences.com**. Learn more at mindxsciences.com/bloodtests.

We look forward to working with you and your team.

Live. Happier. Longer.
